About RiOS Institute

RiOS Institute (Research and Innovation for Organizations and Societies) works to bring the benefits of new technologies to disadvantaged people. We apply design innovations and social science methods to create meaningful and sustained projects.

www.riosinstitute.org

About the UNDESA Global Alliance for ICT and Development

The Alliance responds to the need and demand for an inclusive global forum and platform for cross-sectoral policy dialogue on the use of ICT for enhancing the achievement of internationally agreed development goals, notably reduction of poverty.

UC Berkeley School of Information

About UC Berkeley's School of Information

| UC BERKELEY | ALUMNI.NET

The UC Berkeley School of Information prepares leaders and pioneers solutions to the challenges of transforming information — ubiquitous, abundant, and evolving — into knowledge.

www.ischool.berkeley.edu

Welcome!

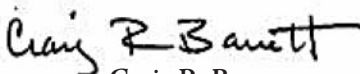

I am pleased to welcome you to the *iGUIDE*, a unique resource guide to ICTD initiatives in Silicon Valley and the San Francisco Bay Area.

The idea for this guide first arose at the “Silicon Valley Challenge Summit” in November 2006 and the subsequent “The UN meets Silicon Valley” meeting which Intel hosted in February 2007. Seeing the impressive number of local ICTD players at such meetings, we were looking for ways in which they could stay connected. The *iGUIDE* presents this opportunity.

As the Chairman of the UN-Global Alliance for ICT and Development, which is joining forces with the RiOS Institute and UC Berkeley’s School of Information to produce this guide, I am especially pleased to see that it is coming to fruition.

This print directory will enable ICTD practitioners from all sectors to reference each other’s work and on the basis of mutual knowledge establish collaborations that will leverage resources. Ultimately, the beneficiaries will be the people served by the various ICTD initiatives, in the service of the Millennium Development Goals.

Intel is glad to support this important initiative to strengthen the local ICTD community.

Craig R. Barrett
Chairman
Intel Corporation

Dear users of the iGUIDE!

The *iGuide: Silicon Valley and San Francisco Bay* is both a blueprint and an aspiration.

A blueprint is an idea, unrealized, of something yet to be built. By taking a roll call of ICTD initiatives and practitioners here in Silicon Valley and the San Francisco Bay Area and by compiling who is doing what, where and how in one easily accessible database, the RiOS Institute, together with the UN-GAID and the School of Information at UC Berkeley has started a process that can now be emulated in other parts of the world.

We look forward to this first iGUIDE blueprint being utilized by our partners in India, Brazil, South Africa, Russia and other countries and regions where ICTD activities are growing. It is our intention to expand and scale this small beginning here in Silicon Valley internationally. Our aim is to help all of the marvelous organizations and individuals working to harness the benefits of ICTs for development. But most of all enjoy their broader ICT and Development community, locally and eventually globally.

The aspiration is for the iGUIDE to help make connections and become a catalyst for exchanges and collaborations. This is also the work we are pursuing at the RiOS Institute, together with the UN Global Alliance for ICT and Development. To build such partnerships across sectors; social, corporate, academic and foundations. This depends on individuals and groups taking the next step to reach out and talk to each other by sharing their time, ideas, challenges and best practices.

Innovation is always to be found in the accidental connection, conversation or daydream after encounters with unexpected chance. The iGUIDE is a resource that can help capitalize on such chances and realize innovations by providing important information in a simple, easily accessible manner.

From its inception, the iGuide has been well supported by many companies, research groups, NGO's and of course our friends at the UN. A special thanks goes to the RiOS iGUIDE team and the faculty and students from University of California, at Berkeley; including the Haas School of Business, the School of Public Health, the Goldman School of Public Policy, the International and Area Studies Program and the School of Information who supported this project. We also thank all participating organizations for their support and encouragement. In particular, Intel, Microsoft, NComputing and Internet Speech provided important financial contributions that greatly helped to make this first-ever local ICTD Resource Guide a reality.

A handwritten signature in black ink that reads "Paul Braund". The signature is written in a cursive, slightly slanted style. Below the signature is a horizontal line that starts under the first name and ends with a small arrow pointing to the right.

Paul Braund
Executive Director
RiOS Institute
Silicon Valley and Berkeley, January 2008

This Guide is the realization of the potential of the technology community of Silicon Valley to give voice and hope to the poor. Silicon Valley has shaped the global information revolution that is rapidly gaining speed, but many challenges and opportunities to innovate remain.

The Global Alliance for ICT and Development wants to catalyze action and promote the notion of “Better Business for Development” in order to meet the global challenge of broad-based development that is at the heart of the Millennium Development Goals.

Developing pro-poor business models, speeding access to computers, connectivity and rich local content to improve entrepreneurship, education, healthcare and government services, as well as bringing the public and private sectors together to enhance the lives of future generations around the world are key objectives for our work.

Sarbuland Khan
Executive Coordinator
Global Alliance for ICT and Development
United Nations
New York, December 2007

DIRECTORY

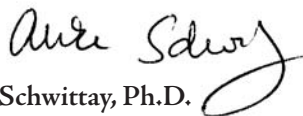

Welcome to the first-ever guide to ICTD resources in Silicon Valley and the San Francisco Bay Area. We have worked hard to make this directory of organizations and initiatives that harness the power of ICTs for global development as comprehensive, accessible and user friendly as possible.

While we could not have assembled the information here without the help of all of you who provided us with feedback and encouragement, a special thanks goes to the iGUIDE team of the 'Social Entrepreneurship in ICTD' seminar taught by the RiOS Institute at the School of Information at UC Berkeley in 2007.

The 55 entries in this guide have been divided into four sectors: social organizations (23 entries), corporations and corporate foundations (15 entries), academy (9 entries) and foundations (8 entries). Each individual entry lists the most important information for each organization: URL, mission, areas of activity and location, as well as contact information. Each entry also is classified according to its type of activity: Funding (F), Practice (P), Research (R) and Training (T).

We now rely on you to keep the iGUIDE current and complete, so please email us your updates, comments and suggestions. More importantly, pass it on the colleagues whom we have missed in this first edition and who should be included in the next one.

We hope that the iGUIDE will become dog-eared rather than dust-covered in your offices and backpacks and are looking forward to your feedback.

Anke Schwittay, Ph.D.

Director of Research

RiOS Institute

anke.schwittay@riosinstitute.org

I. SOCIAL ORGANIZATIONS

With 23 entries, including nonprofit organizations, NGOs and social enterprises, the social sector is the largest in the iGUDE, attesting to the crucial role social organizations of all kinds play in the local ICTD area.

Some of the organizations listed here are for-profit enterprises, but because of their social mission and smaller size, they have been included in the social sector. Most of the organizations present here are well-established groups with proven track records, but we have also included initiatives that are just getting off the ground, and we are always on the look-out for new projects.

Included here are institutions that are pursuing ICTD activities exclusively. Their work spans a wide variety of activities, from providing access to ICTs through low-cost devices or innovative connectivity solutions to human rights, microfinance and economic development initiatives.

II. CORPORATIONS CORPORATE FOUNDATIONS

The 15 entries in this section comprise 7 large and medium-sized corporations in the high-tech industry, 6 corporate foundations and 2 smaller corporations. Together, they provide a range of products and services that are mainly aimed at emerging economies as well as disadvantaged groups within the USA.

Vital Wave Consulting, one of the corporations included in this section, describes the role of the private sector in development as such:

The private sector has a direct and positive impact on the developing world through the expansion of local business ecosystems, the commercialization of new products and services designed specifically for these markets, and business models that increase the affordability of productivity tools. Because these efforts are profitable, they are more sustainable than philanthropic activities. Certainly, there is a place for philanthropy and CSR in addressing the challenges in the developing world. But a sustainable approach to addressing global poverty increases the longevity and size of resources committed to such investments. And corporations that identify credible methods for measuring and promoting the social and economic impact of their business efforts to the development community will experience greater business value through increased brand equity, visibility and an enhanced ability to influence local policies.

III. ACADEMIA

The academic sector is an important participant in the ICTD area by providing both research — theoretical and applied — as well as training and funding to ICTD innovators. In the Bay Area, Berkeley is leading the way, with 5 initiatives of the kind involved in this section taking place at this university.

To single out two programs, the Technology and Infrastructure for Emerging Regions (TIER) program is designing appropriate technologies for developing countries, while the School of Information is working to make ICTD one of its focus areas with a certificate program and designated courses.

At Stanford University, individual students in a number of departments are working on innovative technologies. Both Stanford's Digital Fellow program, which is commencing a new round of fundraising, as well as the Global Social Benefit Incubator (GSBI) at Santa Clara University are providing a learning and networking environment for ICTD entrepreneurs from all parts of the world.

IV. FOUNDATIONS

The 8 foundations listed in this section provide mainly financial resources to ICTD practitioners around the world. While all of them are located in Silicon Valley and most of them have been founded by high-tech entrepreneurs, only one — the Global Career Foundation — devotes itself explicitly and exclusively to funding international ICTD projects.

All others have been classified as partial funders, since they are supporting ICTD alongside other projects, to varying extents and in keeping with their respective missions. The initiatives supported by these foundations range from education to e-government to human rights and access to ICTs in all parts of the world.

Please also note that most of the foundations listed here do not accept unsolicited proposals.

The iGUIDE: ICTD Resources in Silicon Valley and the San Francisco Bay Area is the first-ever comprehensive resource directory of local ICTD initiatives. Its easy-to-use listings of vital information about ICTD organizations and ICTD funders will serve as a valuable resource for ICTD practitioners, not only in Silicon Valley and the San Francisco Bay Area, but also internationally. The iGUIDE will furthermore serve as a blueprint for replication in other areas of the world where ICTD is of growing importance.
